

REBECCA PATEK

FULL STACK SOFTWARE DEVELOPER

CAREER OBJECTIVE

I am a software-developer with a strong background in healthcare and music.

ABOUT ME

- The artificial pancreas sparked my interest in software development! A friend of mine was getting very frustrated with the treatment options for her daughter's diabetes. She was exhausted for having to check her daughter's blood sugar throughout the night and found a solution on gitHub called the artificial pancreas. By hacking into old insulin pumps, and programming in complex math equations via open source software, she was able to help her daughter to not have any more symptoms of diabetes! Now she can sleep through the night and know that her daughter can live symptom free of this disease.
